

Split line action

The split line operation allows a single order line to be divided into multiple lines for more accurate handling of quantities or delivery details.

Executing this action opens a dedicated screen where the confirmed quantity is allocated between the original line and the newly created line.

Split quantity

You want to split the line with quantity 10

Original line quantity*

Quantity is required.

Split line quantity

+ =

Cancel

When a line is split, an additional line is generated.
The new line receives **Stage: New** and **Status: Added**.
The original line reflects the modification with **Status: Changed**.

This operation supports scenarios where quantities need to be distributed across multiple deliveries, packaging units, or processing steps.
